

# TALLYWEB

## SERVICE ALL KINDS OF GUESTS WITH THE REVOLUTIONISING ADMINISTRATION SYSTEM

The Tallyweb administration system is an online system, that can handle and service all types of guests at a campsite or marina, regardless of whether they are visitors or residents with own account/code.

The system can run independently, so guests register check in and payment via self-service on a smartphone, payment machine or info sign. Here it is also possible to purchase services such as power, access to bathing or washing facilities, cranes or merely access to buildings. The guests can follow their consumption via smartphone.

Residents have their own account, they can access from a PC or smartphone. Here they can keep track of their consumption, add money to their account, or choose automatic follow up. Units for e.g. power reading on pedestals/boards and access control are connected via radio signals and are therefore very reliable and can cover large distances.

With Tallyweb the guests are servicing themselves. This frees up resources for administration and control, so you save both time and money.

Tallyweb includes finance control, accessed via the administration module.
